el Hierro y el Tiempo

**el hierro nace en el vientre de una estrella
cuando la estrella muere
se dispersa en el vacío**

**el hierro en el vacío es estable
permanece idéntico a sí mismo
preservando su dureza**

**el hierro pasa a formar parte de la carne de un planeta
donde reacciona con el oxígeno del aire
y se forma el óxido de hierro**

**la herrumbre socava la dureza
el frágil óxido se desmorona
se disuelve en la acidez del agua**

**los mamíferos de sangre caliente bebemos el agua metálica
el hierro se une a la hemoglobina
y produce el color rojo de la sangre**

**el hierro en nuestra sangre se une al oxígeno
del aire que respiramos y alimenta la combustión
de la retorta de nuestro cuerpo**
